DETAILED ACTION

Information Disclosure Statement

1. The Examiner has considered the information disclosure statement (IDS) submitted on 3/22/04.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-5 and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Voigt et al. (4,092,709).

Voigt et al. disclose a multiple output self-oscillating converter regulator power supply in Figs. 1 and 2. The loss free impedance (12), filter capacitor (16), transformer (52), electronic device (68), rectifier (30), load connected to the output windings (202, 216, 226, 234) and output capacitor across load (210, 224, 232, 242).

Allowable Subject Matter

4. Claims 6-16 and 18-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
5. The following is a statement of reasons for the indication of allowable subject matter: None of the prior art of record disclose or teach a power supply in which a load is also connected in parallel with the capacitor, and in which the DC, Direct Current,

voltage across the capacitor and the current to said load are compared to DC reference voltages and regulated by feedback means whereby regulated and adjustable DC voltage and current from zero to maximum is available and AC regulated and adjustable voltage and current from a low value to maximum is available and the respective proportions of DC and AC power selectable as needed.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Koenig et al. disclose a TI channel bank control process and apparatus.
